

Translations: Bassin de culture de spiruline/24/en

A geotextile makes it possible to improve the insulation and especially to prevent the tarpaulin from being torn apart.

- Lay the geotextile at the bottom of the pool and go up along the walls,
- Smooth the fabric by hand to avoid wrinkles and thickenings,
- Favor a little "slack" on the geotextile so that it does not tear with the pressure of the water,
- Bend the angles properly,
- Staple every 20 cm on the outer frame,
- Cut the over-lengths of geotextile 2 cm from the top of the basin,
- Lay the tarpaulin at the bottom of the pool and bring it up along the walls,
- Smooth the tarpaulin by hand to avoid wrinkles and thickenings,
- Favor a little "slack" on the tarpaulin so that it does not tear with the pressure of the water,
- Bend the angles properly,
- Staple every 20 cm on the outer frame,
- Cut the over-lengths of tarpaulin to 2 cm from the top of the basin,
