

Translations:Biodiesel/117/en

- It works in any diesel car, without any conversion or modification of the engine or fuel system - all you need to do is put it in the tank and start your car up. *It also has better properties than SVO when the weather is cold (but not as good as those of petro-diesel-see here for the use of biodiesel in winter). *Unlike SVO, many tests have been carried out on the long term in many countries, covering millions of kilometres.
