

Translations:Biodiesel/119/en

- Form a coil with the copper pipe (around a canister for example). Leave both ends straight, roughly 30cm long.
- Attach the flexible tube to the outlet of the pressure cooker with pipe clamps.
- Connect the copper pipe and the flexible tube together with pipe clamps. {For information| check your connections are watertight. For example, you can put the whole device in water and blow through the pipe. Make sure no bubbles come out of the connections.}
