

# Translations:Champignon Inoculation d'une culture liquide/154/en

---

- Take two sterile compresses and soak them in alcohol.
- Place the needle of your syringe on the flame of one of the candles and wait for the tip to turn red.
- Then place it between the two compresses soaked in alcohol.
- Open your bag/jar in the work area and completely empty the mycelium from your syringe onto your seeds.
- Close the bag/jar immediately by folding the top and attaching your clothespins.
- Remove the air and place it in a non-transparent box at the incubation temperature adapted to the variety (information on the Breizh Bell website).
- Wait for the incubation time adapted to the variety (14 days of oyster mushrooms, other information on the Breizh Bell website). Write it down in your diary!
