

# Translations:Cuisine améliorée/7/en

---

Disadvantages: The cocina mejorada is only adapted to the pots it was built for. If you change your pots, it should be necessary to adjust the size of the holes which let the heat pass through. If your new pot is smaller, you can try to fix it in the hole using rocks (so that it does not fall) but the cooking will be less efficient as the heat will escape between the rocks.

The cocina mejorada can be built within a day but it is previously necessary to let the donkey's dung ferment for 5 days.
