

Translations:Culture de la spiruline/55/en

Harvest

- Install a support (frame, sieve) above the growing basin
- Place a 30micron nylon fabric in the holder to act as a filter.
- Pump the culture medium (or use a pitcher) and pass it through the filter, the culture medium returns to the basin, the spirulina remains in the filter. Harvest as much as possible $\frac{1}{4}$ from the pond.

TIP With a 1000/hour pump and a 500-litre tank, you can filter up to 125 litres, i.e. about 8 minutes of pumping time.
