

Translations:Déodorant maison/28/en

1. Very economical, containing just 3 ingredients. Its only drawback is that it becomes liquid above 25°C (coconut oil) and tends to go out of phase if not kept in a cool place. At home, it may be worth getting into the habit of keeping it in a cool place.
2. Same base as above, to which we add a 4th ingredient, beeswax (beeswax or vegetable wax). As it doesn't melt below 63°C, it allows the deodorant to stay put even when it's very hot.
