

Translations:Elevage de Mouches Soldats Noires/131/en

It is possible to recover these fly larvae in composts in the summer. In temperate zones, they appear spontaneously in moist composts (containing a lot of fruit for example) from a certain temperature. There are also specialist dealers, such as Entofly (France), BlackSoldierFly and NGN (Netherlands).

There's many videos on Youtube, look for: BSF BAIT / TRAP

More information can be found on this Facebook group dedicated to black soldier fly breeding.
