

Translations:Elevage de Mouches Soldats Noires/51/en

The larvae will feed mainly on low-fibrous waste (overripe fruit, vegetables, some leaves such as cabbage, etc.), so it is not necessary to put green waste (leaves, branches, grass). Similarly, thick fruit skins (banana, orange, lemon...) or pits will not be completely degraded. However, they will scrape off all the food available and it may be interesting to put them on, it will just not reduce the volume of waste.
