

Translations:Elevage de Mouches Soldats Noires/84/en

After 2 weeks of feeding on the waste, the BSF larvae can be harvested. At this stage, the larvae have reached their maximum weight, but have not yet transformed into pre-pupae. Their nutritional value is therefore at its highest. Harvesting is the process by which larvae are separated from the residue. This can be done by using a manual or automated screen that easily separates larvae from residues.
