

Translations:Filtre à eau céramique/56/en

Silver is known for its ability to kill microorganisms. Colloidal silver has been used in hospitals and clinics as an antimicrobial agent for cuts, burns and to prevent eye infections in newborns (Lantagne, 2001) and to disinfect drinking water and swimming pools (Russell , 1994, in Lantagne, 2001). The silver is used by NASA to purify water from space flights (NASA CASI, 2007).
