

Translations:Filtre bio-sable pour eau potable/39/en

- To test the washing, put a bit of sand in a closed jar with clean water and shake it. If most of the suspended elements fall to the bottom of the jar within 4 seconds and the water is only slightly turbid, the washing is ok. It is not necessary to remove all suspended micro-particles, otherwise it would reduce filter efficacy.

Generally 4 or 5 washes are necessary.
