

Translations:L'énergie dans l'habitat/71/en

Specific energy is energy use dedicated to lighting, household appliances, office equipment, and hi-fi. It is the only category of energy use in which the need is for electricity; all other energy used in the home is for heating needs. Currently, this category represents 16.6% of energy consumed. This is a little less than 2,700 kWh per year or about 7 kWh per day.
