

# Translations:Lampe solaire à batteries lithium récupérées/117/en

---

However, this waste has a high recycling potential. In particular, lithium present in the cells of computer batteries. When a computer battery fails, one or more cells are defective, but some remain in good condition and can be reused. From these cells it is possible to create a separate battery, which can be used to power an electric drill, recharge your phone or be connected to a solar panel to operate a lamp. By combining several cells it is also possible to form larger device storage batteries.
