

Translations:Lampe solaire à batteries lithium récupérées/190/en

- Cut the positive wire connecting the regulator to the converter in order to open the circuit and weld the switch in series. It will be used to open and close the circuit.

The commutation type of the switch is On-Off-On : the red wire coming from the lamp is welded on the middle electrical connection (Off), and the red wire coming from the charge regulator is welded on one of the other electrical connection (On).
