

Translations:Lampe solaire à batteries lithium récupérées/247/en

- At each end of the formed bottle, fold 1cm wide tabs at 90° towards the inside. Each tab should be bevelled on both sides (such as shown on the photo). The tabs will slip between the two boards (the big and the small one) at each side of the bottle, to improve the lamp's sealing. In order to fold easily the tabs, trace a thin line with the cutter on the inside of the bottle and fold it with the hand.
