

# Translations:Lampe solaire à batteries lithium récupérées/250/en

---

To do that, take one of the small boards used for the mold (11/13cm) and screw all the components on it. The more symmetric the layout is, the more balanced the final lamp will be (the photo shows one possible layout). Be carefull to attach properly the USB port and the switch, so that they don't move when you use them.
