

Translations: Remorque génératrice solaire - Système électrique/3/en

Supported and piloted by the Fondation Schneider Electric in partnership with these associations Low-tech Lab, Énergies sans Frontières and Atelier 21, this project intends to investigate innovative solutions to provide affordable and clean electric energy to training centers that train future electricians. The energy systems created by the technical experts and the teachers of the training centers, will be implemented by students and serve as a pedagogical base.
