---

- Place the plants in your hydroponic pots, then cover the roots with clay balls up to the top of the pot (see photo 2).
- Place your hydroponic pots in the holes in the waterproof fabric (see photo 3).
- Fill the bucket with 10 L of water. Mark this height with an indelible marker (see photo 5).
- Add 2 mL of organic fertilizer to 1 L of water in the bucket. Here, we have a 10 L bucket, so add 20 mL of organic fertilizer.
- Connect the program plug to your home's power supply. Make sure the water pump is always immersed in the water in the bucket. Set your program plug to 15 min every hour (see photo 6).
