- Fill the gutter with clay balls, about 50 mm high. Place your plants directly in the clay balls (see photo 4).
- Fill the bucket with 10 L of water. Mark this height with an indelible marker (see photo 5).
- Add 2 mL of organic fertilizer to 1 L of water in the bucket. Here, we have a 10 L bucket, so add 20 mL of organic fertilizer.
- Connect the program plug to your home's power supply. Make sure the water pump is always immersed in the water in the bucket. Set your programmable plug to 15 min every hour (see photo 6).
