Summary

Introduction

Step 1 - The Fabrication Manual

Step 2 - The movie making

Step 3 - Video Edition

Step 4 - Check List

Comments

Introduction

A low-tech can be an outcome from traditional or modern know-hows. It finds its utility in towns, just as well as in the countryside. It can make part of rich and industrialized environments, or in developing countries. We advise you to think about its questions, spread out in three main themes : the need, the accessibility and the respect, in order to know if your project is truly a low-tech.

""THE NEED"" Does the dispositive answers a basic need ? Food, energetic, or hygienic needs, drinkable water access, tools ?

""ACCESSIBILITY"" Is it accessible from financial, technic, and materials point of view ? Is its realization cost affordable for this kind of need ? Does it calls on an artisanal know-how ? Are the ressources, materials and tools, locals or easily available in markets, fablabs or rubbish dump ?

""RESPECT"" Does it respects environment ? Is it energy-friendly, fixable, or an outcome of recycling ? Does it respects local populations ? Is it appropriate with local way of life and culture ?

""BE CAREFUL !"" Avoid to submit a polluting dispositive. Avoid to promote a specific product or material that would not be open-source.

- Remarque : For non-complete low-techs documentations, it is asked to fill up a minimum, the context paragraph, along with the function of the low-tech. You can then share your ideas, experiences on the discussion part of the Lab'.

TUTORIELS Tutos
NOTICE DE FABRICATION

Pour savoir comment créer une page tutorielle, se référer aux conseils du WikiFab : beta.wikifab.org/index.php/Wikifab-Prémiers_pas

Lors de la rédaction il est primordial d'être concis, précis et de faire des résumés aérés et organisés. En effet, le tutoriel doit donner envie d'être lu. Il est aussi important d'ajouter schémas ou photos à chaque étape pour illustrer son propos.

PRÉREQUIS

- Titre de la low-tech sans article devant « le, un, a, ni de verbes » « Créer un... »
- Brieve description de la low-tech en une phrase
- Photo de la technologie
- Difficulté : Facile, Moyen, Difficile, Très difficile
- Durée (min, heure, jours, semaine)
- Coût (€, \$, ...)
- Licence Attribution - Partage dans les mêmes conditions (CC BY-SA) (image 1)

CONTEXTE

Se poser les bonnes questions aide à formuler un contexte précis et complet. Comment avez-vous été amené à créer ce dispositif ? Est-ce en réponse à un problème ? Est-ce pour une raison économique ? Est-ce par passion, par curiosité ? Quelle est la situation sur le terrain ? D'après votre expérience, l'implantation de la low-tech sur le terrain et son utilisation nécessitent des précautions ou des ententes ? Cette low-tech est-elle utilisée sur le terrain ? Si oui à quelle échelle ? Ou ? Comment a-t-elle été implantée (moyens de diffusion, implantation...) ? Par qui (initiative locale, ONG étrangère, état...) ? (image 2)

FONCTIONNEMENT

1- Expliquer comment fonctionne la low-tech dans les grandes lignes afin d'avoir une idée globale de son fonctionnement

2- Détailler ensuite les différentes parties ou la composent

3- Joindre un schéma de fonctionnement

4- Il est également possible de clarifier les avantages et désavantages de cette technique (image 3)

5 - 27 11 2008 - LE LAB - TUTO DES TUTOS

Materials

Tools

- Paper
- Pencil
- Computer
- Internet
- Camera
- Battery
- SD Card
- Micro
- Tripod

LE LAB - Tuto des tutos .pdf

Step 1 - The Fabrication Manual

""PREQUISITES""

- Low-tech name (with no prepositions "the, a, etc.", with no verbs as "Create a/an..")
- Brieve description of the Low-Tech in one line
- Technology picture
- Difficulty : Easy, Middle, Hard, Very Hard
- Duration : (min, hour, day, week)
- Cost : (€, \$, etc.)
- License : Attribution - Sharing in the same conditions (CC BY-SA) (image 1)

""CONTEXT""

To ask yourself right questions helps to formulate a precise and complete context : How have you been creating this device ? Was it to answer a problem ? Was it for an economic reason ? Was it for a hobby, or to fulfill your curiosity ? What is its added value, its interest ? According to our experience, the integration of the low-tech of the field represents a real problematic. Is your low-tech used on the field ? If yes, how big ? Where ? How has it been integrated (sharing means, integration ways, etc.) ? By who (local initiative, foreign NGO, state, etc.) ? (image 2) Otherwise, how could it be implemented ? By who ? Beyond the necessity, what are the obstacles that could disfavor it (changing in the habits, economic constraints, ergonomic problematics, etc.) ? Furthermore, is a business model possible around the low-tech ? In which way could it improve the life of the ones developing it, dealing it ?

LISTE DES ÉTAPES DE FABRICATION

Lister les étapes de fabrication sous forme de sommaire.

- 1 - ...
- 2 - ...
- 3 - ...

MATÉRIEL CONSOMMABLE

Lister précisément le matériel en explicitant les dimensions (longueur, volume, si besoin). Proposer des alternatives de matériaux dans la mesure du possible.

- 1 - ...
- 2 - ...
- 3 - ...

OUTILS

Lister précisément les outils nécessaires à la fabrication du système.

- a - ...
- b - ...
- c - ...

ÉTAPES DE FABRICATION

Mettre un titre clair et précis à chacune des étapes.

Lister les sous-étapes comme pour une recette de cuisine.

- 1- Percer.
- 2- Souder.
- 3- Clouer.

Penser également à mentionner les conditions de sécurité, point de contact, point, contact CRP-DRUG.

Si besoin ajouter « Remarque » ou « Attention » pour souligner des points importants.

CONSEILS D'UTILISATION & REMARQUES

Ajouter les remarques, conseils d'utilisation ou de fabrication.

NOTES ET RÉFÉRENCES

Partager les sources afin que les lecteurs puissent aller rechercher des informations supplémentaires.

Exemple d'une notice de fabrication bien réalisée sur le Lab'

7 - 27 11 2008 - LE LAB - TUTO DES TUTOS

Indeed, local entrepreneurs can benefit of low cost commercialization, making local population profit of these low-techs in the same time.

""FUNCTIONING""

1 - Explain how is working the low-tech in the high lines, in order to get a global idea of its functioning. 2 - Detail, then, the different parts composing it. 3 - Join a functioning schematic 4 - It is also possible to cite pros and cons of this technique. (image 3)

""LIST OF FABRICATION STEPS""

List fabrication steps in the form of a summary.

- 1 - ...
- 2 - ...
- 3 - ...

""CONSUMABLE MATERIAL""

List precisely the material, expliciting dimensions (distances, volumes, etc.) if needed. Present, if possible, alternatives in the choice of materials.

- 1 - ...
- 2 - ...
- 3 - ...

""TOOLS""

List precisely needed tools to build the system.

- a - ...
- b - ...
- c - ...

""FABRICATION STEPS""

Put a light and clear title to every steps. List sub-steps as you do for a cooking receipe. A sub-step represents an action.

- 1 - Drill ...
- 2 - Melt ...
- 3 - Nail ...

This also to mention security conditions : wearing of glasses, gloves, ear protectors, etc. If needed, add ""Remarks" or ""Warnings" to underline critical points.

""DIRECTIONS FOR USE & REMARKS""

Add remarks, directives of use, of fabrication.

""NOTES AND REFERENCES""

Share sources in order to let the readers look for additionnal informations.

Example of a step by step how to correctly realized on the Lab' : <http://lab.lowtechlab.org/index.php?title=L%27%C3%A9olienne> (So far in French)

Step 2 - The movie making

""1 - Tools""

A camera, a microphone, SD cards, batteries, a tripod. Check before use the state of your tools : SD card with sufficient disk space, battery charged, etc.

""2 - Location of the movie""

Choose where does the action takes place, in order to have a good sound quality and good luminosity:

- Indoor, beware of the lack of light and artificial lights, that will impact your video quality. Think of fridges, clocks as well, that could create parasite sounds. These will be disappointing for the spectator watching your video.
- Outdoor, beware of backlighting and the lack of light. Concerning the sound, the wind is fatal. Protect your microphone and its exposure !

"In both cases:"

- Be careful that no big light pits are in your field of view.
- Avoid too big spaces, the backplane should rather be short.

- Filming during the day is highly recommended. At night, you'll get granulas on your images.

""3 - Positionning of the camera""

In order to know where to place the camera, ask the actor what he's going to do at each step. It is therefore easy to place the camera without being annoyed with his hands. On the workbench should only be present the material used at the precise step. This permits not to be visually polluted.

""4 - Scenes""

"Dissect steps" :

Film one scene per step, if possible.

- Vary short and large scenes to air the video.
- For explicative scenes (explanation of a step, of the context), prefer large scenes.
- For active scenes (filming the action), prefer short scenes.
- It is highly recommended to film two frames per action.
- Head to foot framings are not recommended, prefer middle range frames or short frames. - When someone is speaking, do not "cut his head off" during framing. Let an empty space above him.
- Avoid to place the person right in the center of the frame. Putting him on the side will bring dynamism to your scene.
- Filming static scenes is highly recommended to avoair any shaking.
- Put the camera on a tripod or on something static.

""5 - Focus""

For the focus, check whether the camera is on automatic or manual mode.

- If it is on automatic, well check that the camera is focusing on the action and not on the person head.
 - If it is on manual, set the focus on the action before starting to film.
- ""Example"": "Here, I'm going to melt the white wire on the + pole...". We need here a close plane, we focus on the object to melt, and we check that our hands are not between the object and the camera when we film. ""Be careful"" : For tutos realized with smartphones, the difficulty is to realize static scenes. Put the phone on a stable, static place during the whole sequence.

""6 - Filming in order to edit the video""

- Don't tell yourself that mistakes can be rectified at video editing.
- Avoid to film in black and white or vertically.
- Launching the video recordings, let a dead time before action starts or discussion begins in order to facilitate video editing.
- Make simple rushes for get an easy video edition.

""7 - Content""

The video content will tighly be linked to the written step by step.

"Context video : (2 minutes)"

- Present the low-tech and its economical, environmental, social or other interests.
- Present an issue solved by the low-tech (problematic and solution)
- Do not hesitate to start from a larger context to a local one, or even personal one.
- It is important to choose with the speaker, what is going to be said. Le scene will be explicative, so prefer a large frame scene.

- Add cut-scenes (action) for this part don't be only a monolog in front of the camera. Think as well to make action scenes "on the field", that will be in concordance with the context.

"Fabrication video : (5-10 minutes)"

Ask yourself which kind of video is preferable to realize. Notably when speaking of explanations : will they be voice-overed, lived, or subtitled ?

- Beware of hands between the camera and the action.
- Always keep in mind that everyone has to understand the action. For this, it can be interesting to explain : "I'm doing this action for this reason, with this material that I got at this place ..."
- Do not forget to mention safety intructions.

"Dissect the fabrication in several key-steps:"

- The functioning: present the functioning principle of the low-tech
- The material : materials and tools necessary for the fabrication
- The fabrication : dissect every step, one scene for one action, and explain them precisely, speaking loud and articulating.
- The use : scenes on its situation.
- Advices : It is possible to finish the video giving some advices.

Step 3 - Video Edition

""1 - Unrush""

Once the scenes are filmed, they need to be sorted and stored. In a folder, cut-paste the SD card files and watch the rushes one by one.

- Remark : reproduce table 1, and fill it, in order to keep a mark of every rush content, without needing to watch it several times.

""2 - Video Edition""

- Remark : You can download a movie-making software as Adobe CC Première Pro, or Movie Maker. After the unrush, begins the video edition. Select all validated rushes (in this case, rushes 3 and 5). Place them in the chronological order on the video edition timeline. Listen carefully the soundtrack and cut-off non-useful sequences, in order to smooth the video.

As it's highly recommended to realize short videos, cut every gaps. This will allow as well to get more dynamism. In a second time, ajust luminosity : - Outdoors, the light can be very strong. - Indoors, the picture can take a yellow tint, because of lighting systems. Adjust tones.

""3 - Context video""

Think about including cut scenes : emergency scenes made to be placed between explicative scene, to get a more dynamic film. With these softwares, it is possible to cut the image while keeping the sound, in order to have an illustrative scene with a voice-over.

""4 - Fabrication video""

It can be interesting to cut the video in chapters : functioning, material, fabrication, use and advices. Think as well about including a generic at the beginning and the end of the video. This way, it will be easily identified (add a logo, a website or a Facebook page, this is the best moment to communicate them). The generic at the beginning should at least contain the video title. The generic at the end should contain the names of the low-tech and the video makers.

N° Rush	Action/Scene	Angle	Sen	Qualité
1	présentation de matériel	large	OK	bonne qualité
2	"	"	OK	bonne qualité
3	utilisation d'un panneau et des câbles	large	OK	bonne qualité
4	"	"	OK	bonne qualité
5	"	"	OK	bonne qualité

LE MONTAGE

1 - De-rush
Une fois les plans filmés il faut les trier et les stocker dans un dossier, voir la carte SD et regarder les rushes un par un.
"Remarque : reproduire le tableau 1 et remplir-choix de garder une trace du contenu de chaque rush pour faciliter le travail de repérer plusieurs fois"

2 - Montage
"Remarque : vous pouvez télécharger un logiciel de montage comme Adobe CC Première Pro ou encore iMovie"
Après la de-rush commence le montage. Sélectionner tous les rushes validés dans notre cas le rush 3 et 5.
Les disposer dans l'ordre chronologique sur la table de montage.
Écouter attentivement la bande son et couper les séquences « inutile » afin de laisser la vidéo.
Comme il est fortement conseillé de réaliser des vidéos courtes, couper le moindre moment de blanc, ceci permettra également de rendre la vidéo plus dynamique.
Dans un second temps, ajuster la luminosité.
"En extérieur, la lumière peut être très éblouissante. En intérieur l'image peut prendre une couleur jaune à cause des systèmes d'éclairage, ajuster les tons."

3 - Vidéo contexte
Penser à inclure des plans de coupe (plans d'entrée à l'intérieur de l'équipage) pour rendre la vidéo dynamique, entre les plans espacés, pour rendre la vidéo dynamique il est possible avec des logiciels de couper l'image et garder le son de manière à avoir un plan illustratif avec une voix-off.

4 - Vidéo de fabrication
Il peut être intéressant de découper la vidéo en tranches, fondamentalement matériel, fabrication, utilisation et conseils. Penser également à inclure un générique au début et à la fin de la vidéo pour cela soit plus facilement identifiable ajouter un logo, un site internet ou un page Facebook, c'est l'occasion de les communiquer.
Le générique du début doit au moins contenir le titre de la vidéo, et celui de la fin, les réalisateurs de la scénarologie et de la vidéo.
Exemple d'une vidéo tutorielle bien réalisée sur la lab.

Step 4 - Check List

""WRITTEN STEP BY STEP :""

- I thought about the context of the fabrication, about its use, and its integration.
- I understood how the low-tech is functioning. I know how to explain it well. I have pictures and schematics to illustrate it.
- I established the list of fabrication steps
- Every single object used for the fabrication is listed
- I've well dissected fabrication steps with a substep for every instruction. I have been careful to mention safety instructions.
- I've been thinking as a potential user of my tutorial and I gave him my advices for the fabrication of the low-tech and how to use it.
- I've been careful to mention my sources.

""SHOOTING :""

- I checked the state of my material (camera, microphone, empty SD cards, batteries full)
- I chose a place with good sound and light qualities.
- I took care to ask the actor what is he going to do for each step.
- I think about varying the scenes, filming one scene per step and shooting static scenes.
- I focused right on the action
- I've well noted not to tell myself "this, I will rectify it during video edition" !
- What I'm shooting is tightly linked to the written step by step.

""VIDEO EDITING:""

- I stored, sorted, watched to every of my rushes, then I filled out table 1 to keep a mark of the content.
- I've downloaded a video-edition software in which I placed all my rushed chronologically on the timeline. I've listened carefully the soundtrack and cut non-useful sequences. I've also adjusted the luminosity parameter.
- I thank about adding cut scenes on explicative scenes.
- I dissected the video in chapters as for example functioning, material, fabrication, use, advices. I added a generic a tthe beginning and the end to be easily identifiable.

CHECK LISTE V

NOTICE DE FABRICATION

- Je réfléchis au contexte de fabrication à l'utilisation et l'implantation
- Je révisé à expliquer le fonctionnement de la low-tech (texte / photos / schémas)
- J'ai établi la liste des étapes de fabrication
- Le montage audio du matériel qui a été utilisé pour la fabrication est listé
- Je bien décrit les étapes de fabrication avec une sous étape par instruction. J'ai pris le soin de mentionner les conseils de sécurité
- Je me suis mis à la place de l'utilisateur du tutoriel et je lui ai donné mes conseils pour la fabrication et son utilisation
- J'ai bien pris soin de mentionner mes sources

TOURNAGE

- J'ai vérifié l'état de mon matériel (caméra, micro, cartes SD vides, batteries pleines)
- J'ai choisi un lieu avec une bonne qualité sonore et lumineuse
- J'ai pris le soin de demander ce que va faire l'acteur à chaque étape
- J'ai pensé à varier les plans. Filmé un plan par étape et effectué des plans fixes
- J'ai fait la mise au point sur l'action
- J'ai bien fait attention à ne pas me dire « ça je le retravaillera au montage » !
- De que je filme est étiqueté lié à la notice de fabrication

MONTAGE

- J'ai accédé, rangé, regardé mes rushes un par un
- Je travaillerais un logiciel de montage ou découpé tous mes rush vidéos sur ma table de montage. J'ai écouté attentivement la bande son et coupé les séquences inutiles. J'ai également ajusté la luminosité
- Vidéo contexte : J'ai pensé à mettre des plans de coupe sur les plans explicatifs
- Vidéo de fabrication : J'ai découpé la vidéo en chapitres et j'ai mis un générique au début et à la fin pour être plus facilement identifiable
