

# Translations:Champignon Inoculation d'une culture liquide/153/en

---

- Take out your grains and rinse them thoroughly with cold water, until clear water is obtained.
- Place these grains in a container.
- Take calcium carbonate (CaCO<sub>3</sub>) and add 2-5% of the weight of your grains.
- Fill this bag with hot tap water, slightly above the level of the beans.
- Close your container and let stand overnight.
