

Translations:Cuisinière améliorée - Modèle Patsari/40/en

- Position the large hotplate. Make sure it is in the center of the stove.
- Position two hollow bricks, two sections of aluminum, or two tin cans (note that tin cans risk oxidizing quite quickly), against the hotplate at the exit of the combustion chamber so as to form two smoke venting tunnels. Make sure to leave a height of 2cm between the top of the tunnel and the edges of the cooker.
