

Translations:Hydroponie/42/en

- In this model we explain the process for 3 gutters but it is of course possible to duplicate it at will !
- Cut 4 strips of the same length (190 cm for us)
- Attach them parallel to a support using brackets and screws at regular intervals (15 cm)
- Staple the tarpaulin on the side of the first strip and then extend it to cover the next three (Possibility to double the tarpaulin for more resistance)
- Form gutters with the tarpaulin until it touches the support
- Staple the tarpaulin on each strip and cut it out.
- Water recovery
