

Translations:Pédalier multifonction/12/en

- Salvage the hub of the front wheel (which is not used) and remove all spokes.
- Attach a pulley on either side of the hub. Transmission pulley 1 will be driven by a belt connected to the bike wheel, and transmission pulley 2 will power the desired tool with a second belt.
- Secure the hub on a block of wood with the eye straps. This block of wood will later be attached to the table.
