

Translations:Pédalier multifonction/14/en

- Since it is difficult to shorten a belt, it is best to determine the height of your table based on the belt you have. In our case, the table is 1 meter above the ground. Its structure is made of battens and the worktop is made of pallet boards. Attach it securely to the ground.
- A 2 cm gap between two pallet boards allows the belt that connects the wheel to the transmission pulley 1 to pass through.

Be careful that the cyclist's knees do not touch the table while pedaling.
